State-of-the-Art High Volume Roll Form Operation using Induction Welding Processes for Closed Tube Beams.

AWS Certified Welders

The quality of the workmanship performed on a rack system directly relates to that rack’s durability and safe usage. RIDG-U-Rak uses AWS certified welders to ensure manufacture of reliable products.

State-of-the-Art Powder Coat Paint System

Racks built to last require a durable finish. Our powder coated paint finish has superior impact resistance and is applied by our state-of-the-art automated paint line for uniform quality. Additionally, hard-to-access areas are hand-sprayed to ensure coverage. RIDG-U-Rak systems meet these requirements, providing a lasting finish for better appearance and reduced maintenance.

Certified Fabrication

Through an audit and approval process of the rack system, RIDG-U-Rak is an advanced and certified manufacturer in a number of municipalities around the United States.

RIDG-U-RAK’s Pick Module storage systems include push back, gravity flow, 100% selective and other storage systems along with flooring, decking and platforms to maximize productivity and space utilization. Our project engineers work directly with engineering firms and systems integrators to design high density, high throughput storage systems. RIDG-U-RAK provides turnkey services from design through complete installation.

Quality Manufacturing

Ridg-U-Rak is a founding member in good standing of RMl. The Storage Rack covered by this manual is in full compliance with the latest design specifications approved by the membership of the Rack Manufacturers Institute. We believe that it is important to you that your supplier be committed to the principles of continuous improvement in the manufacturing and quality control process and to the highest professional and ethical standards of performance as embodied in the mission and work conducted within RMl.

Increased Productivity for Operations and Fulfillment Systems

Multiple SKUs in a variety of lot size requirements are easily handled by the interface of storage methods. Slower moving items in pallet loads are fed into the system from 100% selective or drive-in racks. Faster moving pallet loads are fed from push-back high density storage lanes that provide over 90% utilization of storage space. Gravity flow pick modules deliver carton lots and pick-to-light items to the order fulfillment lines. No wasted space. No wasted movement. No wasted time. Every cubic foot of valuable space works for you.

Ridg-U-Rak provides a multiple level, highly concentrated order picking system for one of the nation’s leading pharmaceutical manufacturers. Conveyors carry totes through upper level of work platform picking stations down to floor level picking lane and shipping. The entire product line is accessible and Ridg-U-Rak gravity flow storage lanes ensure there are no stock outages.

Hats Off to Efficiency

To quickly and accurately pick orders for retail outlets, the nation’s largest hat maker moves product through a custom designed Ridg-U-Rak storage system.

Distribution Center

Catalog fulfillment sales for a leading retailer are expedited through a comprehensive multi-level distribution center. Ridg-U-Rak pick module storage systems keep product moving and deliveries on time.
